FIELD OF INVENTION

The present invention relates generally to computerized information systems and more particularly to web-enabled computer implemented financial modeling systems.

BACKGROUND OF THE INVENTION

Traditionally, many individuals have entrusted their financial plans to personal financial advisors. But today, more and more individuals are taking their financial destiny into their own hands and playing a more active role in planning and achieving their financial goals.

Increasingly, these individuals rely on computer-based systems that organize their financial assets and liabilities and further provide them with a summary of their financial health.
